

# CEREBRUM ANATOMY NOTES

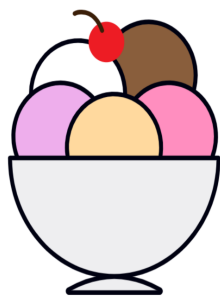

We know our brain consists of three main parts. Do you remember what these are called...two sound quite similar. Yes, that's right, the cereBRUM which is the largest area, the CereBELLUM underneath and the BRAIN STEM.

SubhanAllah, its amazing just how amazing Allah has created our brains that allow us to do so much,

Today lets look into the CEREBRUM a little closer.

The cerebrum is divided into FOUR LOBES. Let's memorise this mnemonic to help us remember their names, because without our brain we wouldnt be able to taste sweet, delicious ICECREAM with...

## CEREBRUM ANATOMY NOTES (CONT)

When you think of the **FRONTAL LOBE** think of it as **FIGURING** out because this part of the Cerebrum is responsible for problem solving and planning. Also think of **FUN** and **FASCINATING**, because its also responsible for our emotions and our behavior. Also think of **FOCUS** because its responsible for concentration and self-awareness. Lets repeat, **FUN, FASCINATING AND FOCUS IS WHAT OUR FRONTAL LOBE IS FOR!**

Let's pop over to the **PARIETAL** Lobe now.

Any guesses what Parietal could be? **OUCH!!** Think of Parietal as **PAIN**, because this is the part of our brain that senses **PAIN**, aswell as **TOUCH** and **TEMPERATURE**.

Over to **OCCIPITAL** lobe now. Oh, I see you're thinking what this might be? Well I like to think of this as the brains **OPTICIAN**, responsible for interpreting our vision!

And last but not least, the **TEMPORAL LOBE!** When I think of the **TEMPORAL** Lobe, **TIMES TABLES** come to mind. What do we need to remember our times table... Yes that's right, we use our **MEMORY**, which is what the temporal lobe is responsible for. And you get someone to test you, who **HEARS** you read them aloud, because it's also responsible for hearing. And you have to **UNDERSTAND LANGUAGE** for you to memorise your timetables, another of its jobs.

Great job! You now know more about your Cerebrum and its four lobes!
